

CS5302/EE519 Speech and Language Processing (Spring '24)

Programming Assignment Policies

Submission Instructions

You must submit **all** the notebook `.ipynb` files, and Python `.py` files, on LMS (search on how to extract the scripts if you're confused). **All cell outputs must be visible for credit.**

Zip your files, naming it `Rollnumber_PAx.zip`. Do not forget to fill in your roll number for any of the files.

For example, if your roll number was `24100000`, then the submission file would look like

```
|— 24100000_PA3.zip
|   |— 24100000_PA3.ipynb
|   |— 24100000_PA3.py
```

Plagiarism Policy

All work must be done independently.

You will be awarded 0 marks or investigated for plagiarism for submitting someone else's assignment, incorrect/corrupted files, and/or your own older assignments. We will not accept resubmissions in these cases, even if the system date shows that the file was not modified after the deadline.

If you are confused about what constitutes plagiarism, it is your responsibility to consult with the TAs in a timely manner. Ignorance is not an excuse.

Submission/Grace Days Policy

You have 5 grace days for the entire semester. This means that across all of your Programming Assignments, you are allowed to submit 5 days late without any reduction to your overall marks.

No late submission of assignments is allowed after your grace days have expired. We do not have any deduction policy for late submissions in addition to the grace days. All grace days must be utilized before the start of the dead week, and any remaining grace days will expire as soon as the dead week begins.

There is a negative marking for skipped assignments and no n-x policy for assignments. Assignments are an essential building block of this course, and it will be ensured that students who pass the course have significant hands-on experience.

Please do not wait until the last moment to submit assignments and other components. Any requests to accommodate late submissions due to last-minute issues (submission of partial or incorrect files, assignment server downtime, internet and power failures, personal problems, etc.) would not be accommodated.
